**SAY NO** to private development  
in our National Parks

The Queensland Government is advancing plans to create private development leases inside Coolooloa National Park and other National Parks across the State.

These leases will be developed and operated as private luxury accommodation.

The sites are located on fragile and significant sites within Coolooloa including Double Island Point,

Poona Lake, and Noosa River.

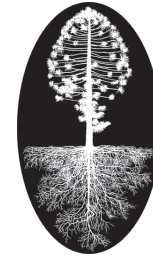

National Parks are public property and the only places that biodiversity and natural process has free of commercial development and resource extraction.

The Government has failed to consult properly on this major change to our National Parks and continues to avoid answering important questions about it.

**Please help us stop this terrible plan**

## Our National Parks: valuable and in need of help

Our National Parks play an enormous role in our lives. Their fundamental role has been to protect biodiversity. All other uses within them were subordinate to this priority function. This is called the 'Cardinal Principle' of Parks Management.

This principle is vitally important due to the direct linkage between Climate Change and Biodiversity, and the current accelerating rate of extinctions.

Actions that promote private leasehold and development within our National Parks seriously undermine these vital functions.

Huge ecological and social benefits can be realised by advancing First Nations' connection to country across National Parks.

---

Consequently Protect Our Parks advocate the following:

- *Cease all proposals for private land tenure and privately built infrastructure within National Parks.*
- *First Nations' connection to country is an imperative. It should not be dependent upon private land and development deals inside our National Parks.*
- *Consult genuinely with Queenslanders about the purpose and use of our Parks before making irreversible changes to them.*
- *Ensure that biodiversity, in conjunction with First Nations' cultural needs, are the highest priority within National Park management*
- *Recognise that Biodiversity and Protected Areas are crucial to successfully addressing climate change.*
- *Make our National Parks bigger and better*
- *Increase resources to Parks management to ensure fulfilment of biodiversity and First Nations' cultural imperatives*
